VCG

Data centre & Cloud at a glance

Technology transformation or business application experience?

Your business maturity depends, now more than ever, on a robust technology transformation journey, whether you are a small business or an enterprise level organisation.

Our data centre & cloud engineering capability helps businesses optimise and modernise IT architecture, accelerate digital transformation, cyber resilience, and support environmentally friendly technology choices.
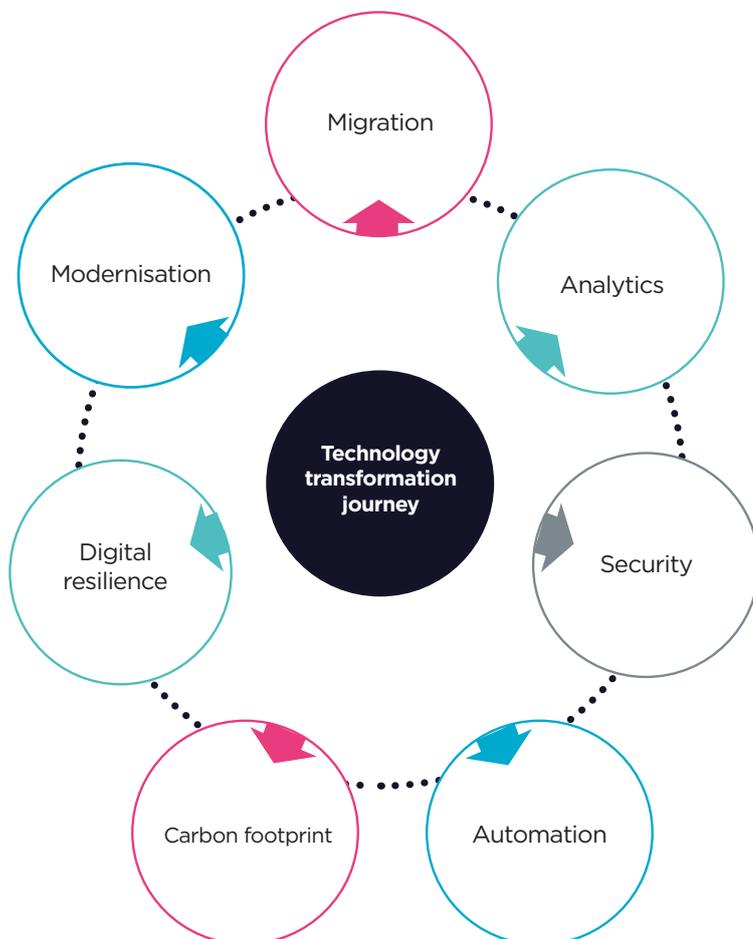

Modernising data, applications and Cloud

Our aim is to help organisations through their technology lifecycle, with managed professional services and specialised data centre capabilities.

The goal is to help consolidate cloud adoption, data security and business application experience across departments and locations.

Our specialists can help you understand where you are and where you need to be, or simply 'health-check' your existing setup.

Solving together

- **Transition workloads to the cloud**
- **Data centre migrations**
- **Modernise and rebuild applications**
- **Automation and machine learning**
- **Reducing carbon footprint**
- **Secure and resilient data centre services**
- **Managing data and business applications**

Technology transformation journey: Migration, Analytics, Security, Automation, Carbon footprint, Digital resilience, Modernisation
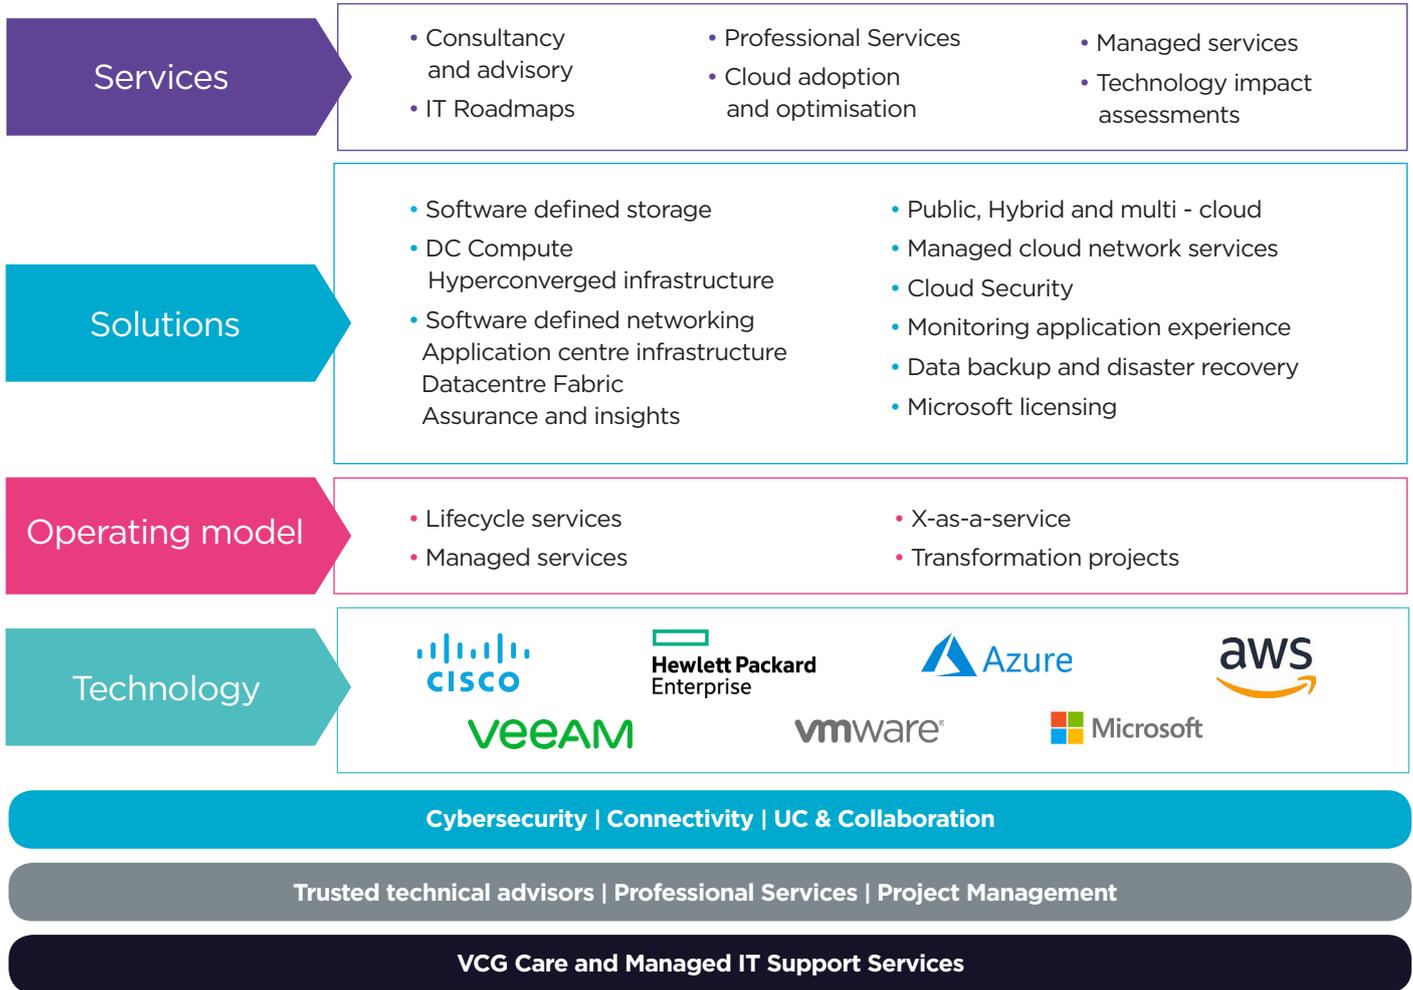

Business outcomes

- Enable modernisation across your entire infrastructure with no gaps or vulnerabilities

- Build a better understanding of your cyber security tools and IT setup with a data and 'security first' roadmap review

- Become more resilient and better prepared for future challenges

- Optimise costs across your business technology stack

- Increase power efficient storage and compute options

- Know what's possible: analytics, automation, carbon footprint, you name it!

On premise, hybrid and Cloud solutions

Enabling decision makers to **navigate the challenges of datacentre and cloud complexity** with a 'security first' approach, consultancy and professional services, and a robust managed services capability.

Services

- Consultancy and advisory
- IT Roadmaps
- Professional Services
- Cloud adoption and optimisation
- Managed services
- Technology impact assessments

Solutions

- Software defined storage
- DC Compute Hyperconverged infrastructure
- Software defined networking Application centre infrastructure Datacentre Fabric Assurance and insights
- Public, Hybrid and multi - cloud
- Managed cloud network services
- Cloud Security
- Monitoring application experience
- Data backup and disaster recovery
- Microsoft licensing

Operating model

- Lifecycle services
- Managed services
- X-as-a-service
- Transformation projects
